ReactJs Development Internship Assignment Instructions

Note: If the applicant is unable to access the figma file, they can refer to the PDF provided to you with this assignment.

1. This assignment website must be built with ReactJs **ONLY** and the applicant may use any styling libraries that they prefer (CSS, SASS, Bootstrap, Styled Components, Semantic UI, etc.).

2. Linked HERE is the Figma design file that the applicant needs to refer.

3. In the file you will find the design guidelines and design mockups for the homepage and the contact page.

4. Please refer to the design guidelines for the colors and typography used in the design. The applicant may use any other fonts in their assignment (in which case please use at least one font by importing it from Google Fonts, Adobe Fonts, etc.). You can explore the exact styling in the Figma file itself.

5. The applicant can use their own assets for this assignment. All the images, icons and vectors can also be exported as PNGs and SVGs from the Figma file.

6. The actual website does **NOT** have to be pixel perfect but the general layout and spacing must be preserved.

7. React Router needs to be implemented for navigation. **ONLY** the navigation links and form submit button are expected to work. Linking for the other CTAs can be ignored.

8. The section "Trusted Companies" on the homepage contains a slider/carousel, for which the applicant can use Javascript or any NPM Package/library that they prefer (SwiperJs, Slick Slider, etc.).

9. The contact form **MUST** be working and all the submissions should be redirected to (developers@webalar.in) this email address.

10. The website should be made responsive for mobile screens. The file doesn't include a design for mobile layout so the applicants can use their creativity for the responsive layout and mobile menu.

11. The finished code **MUST** be uploaded to your Github account and hosted using any free resource available ([Github Pages](), [Netlify](), [Vercel](), [HerokuApp](), etc.).

12. Applicants may also add any other elements or sections to the website to showcase their skills and creativity

13. Don't hesitate to ask questions in the Internshala chat and give this assignment your best effort as this will be a great addition to your profile.

Good luck
